Vestal, NY 13850

Re: Sewer Extension Engineering Report
for the property located at:
20-34 Lisle Ave
Binghamton, NY 13901

To Whom it May Concern:

The proposed average daily sanitary sewage outflow from the proposed site is greater than 2,500 GPD and triggers the need for a Sewer Extension Engineering Report. Please see below for the list of information required for the sewer extension engineering report, whether it is applicable to our project, and whether our office needs additional guidance.

1. Development location and description
 - a. The property is located at 20-34 Lisle Ave in Binghamton. A new 5-story apartment building is proposed to connect to the existing building.
2. Existing Site description, including existing sewage flow to the publicly owner treatment works (POTW), if any.
 - a. There is no existing sewage flow to the POTW.
3. Description of proposed new or modified Private Sewer.
 - a. There is no proposed new or modified Private Sewer in this application.
4. (if applicable) Proposed new or modified POTW (sewer or treatment plant), alternatives, financing, and permits.
 - a. There is no proposed new or modified POTW in this application.
5. Anticipated sewage volume/flow in gallons per day (to be used for a computation of the minimum-required I/I Offset Flow Credits under this Program) and Pollutant Load Generation to POTW.
 - a. The anticipated sanitary sewage volume in gallons per day from the site is listed on the accompanying Sewer Connection Permit Application.
6. Existing Sewer System Capacity Analysis
 - a. DRPILLA needs guidance from the Town on how to do this analysis and determine the existing sewer capacity.
7. Listing of all applicable permits.
 - a. A new sewer connection permit is required.
8. Plan and Program for construction supervision and sewer testing.
 - a. DRPILLA needs guidance from the Town on what they will require for sewer testing and construction supervision.

Best regards,

German Feldman, PE
