Re: Binghamton-Johnson City Joint Sewage Board (Board)
Industrial Wastewater Pretreatment Status
Permit Modification Request – Formal Response

Dear Mr. Wood:

The Board received Frito Lay's request for permit modification, dated March 28th, 2023, in relation to your facility's Industrial Wastewater Pretreatment Permit (Permit No. 33). Frito Lay has requested an increase in the permitted limit for Biochemical Oxygen Demand (BOD) from 7,300 lbs. per day to 8,300 lbs. per day in the facility's wastewater discharge. We have carefully considered this request and determined that we are unable to accommodate the permit limit increase at this time without a further engineering study to confirm the Boards ability to accept the increased BOD load.

The Board appreciates your cooperation in the Pretreatment Program, proactive communication, and efforts toward maintaining permit compliance. If you have any questions or concerns, please feel free to contact me.

Sincerely,

Elliott Wagner
Superintendent
